

When you're trying to stay afloat in a sea of drug information...

Martindale comes to the rescue time and time again!

Comprehensive and specific

Pharmacists are faced with drug enquiries that arrive daily from a wide variety of sources. *Martindale* complements existing knowledge, by giving access to a comprehensive reference resource that has already evaluated the vast sea of published literature. Unprecedented in breadth of coverage and level of detail, the 37th edition it is still the ideal first-line reference work and remains a trusted source of information for more detailed drug enquiries.

Alongside conventional medicines, information is included on herbals, diagnostic agents, radiopharmaceuticals, pharmaceutical excipients, toxins, and poisons making *Martindale* your complete compendium of pharmaceutical topics.

Accurate and reliable content

Martindale content is recognized, worldwide, as being accurate and reliable. Rigorous editorial processes ensure that all revision and revalidation of content is checked and double-checked. As well as carrying out literature searches of particular topics, our in-house team of pharmacists and technicians hand search selected major medical journals and regularly check the websites of regulatory authorities.

International coverage

Now that some prescriptions can be filled outside of the country of issue, access to international drug information is essential. *Martindale* allows pharmacists to identify foreign drugs and assess whether they are available in their – perhaps under a different name – and what alternatives are suitable.

For the first time, in the 37th edition, a multilingual lexicon of pharmaceutical terms that may be encountered on prescriptions can now be accessed.

Details on proprietary preparations and their uses are included from over 41 countries and regions.

Contextual information

Martindale is much more than a simple encyclopaedia of medicines. The resource provides a broad overview of pharmaceutical topics and in a print format that can be easily browsed.

- introductory abstracts helping to acquaint the user with each topic
- restrictions by the World Anti-Doping Agency
- molecular structural formulae, to support academic research and teaching
- primary references, enabling further investigation
- treatment reviews assess drugs within the context of treating specific diseases
