

Volume B

Preparations

This section of Martindale contains brief details of proprietary preparations available in a number of countries and includes those supplied on prescription as well as those sold directly to the public. They are provided to help the reader identify preparations and to suggest their uses. Inclusion is not an endorsement of the activity of any ingredient nor of the preparation's indications.

For this edition we have covered Argentina, Australia, Austria, Belgium, Brazil, Canada, Chile, Czech Republic, Denmark, Finland, France, Germany, Greece, Hong Kong, Hungary, India, Indonesia, Ireland, Israel, Italy, Malaysia, Mexico, the Netherlands, New Zealand, Norway, Philippines, Poland, Portugal, Russia, Singapore, South Africa, Spain, Sweden, Switzerland, Thailand, Turkey, Ukraine, the United Arab Emirates, UK, USA, and Venezuela. We have also included some proprietary preparations from Japan. Generally each entry consists of: the proprietary name; manufacturer or source of supply and country; ingredients usually listed by the manufacturer as being active; and a guide to the manufacturer's indications. Where possible, entries from different countries but with the same name and active ingredients have been amalgamated for clarity. We have tried to highlight instances where preparations are available with the same name, but significantly different ingredients.

An entry may cover a range of dosage forms and strengths. Dosage forms are only specified when different forms have the same proprietary name but different active ingredients. Specifying all dosage forms and the quantity of each

active ingredient would have vastly increased the number of entries. Furthermore, this section is not intended as a guide to prescribing; where a preparation is to be supplied the dose should be appropriate for that preparation and that particular patient, and authoritative local sources should be consulted.

The ingredients have usually been translated into English. Almost all the ingredients listed are described in the monographs in Volume A, and readers are directed to an appropriate monograph by the page number provided after the ingredient.

We have tried to include preparations that were available in the last few years since they may still be in circulation and their names may still be referred to in the literature and in practice. Such preparations that have been withdrawn from the market or are no longer being actively marketed may be identified by the symbol †. Readers should be aware that since this section was prepared other preparations are likely to have been withdrawn or introduced; also ingredients may change, as may indications.

The manufacturer's full name and address can be found in the Directory of Manufacturers.

Each preparation title is also listed in the General Index. Where thought helpful, preparation titles have also been listed at the end of the relevant monograph. However, it should be noted that the absence of such a list at the end of a monograph is no indication as to the availability of a substance as many drugs are marketed as generic or unbranded preparations.
