Stockley’s Interaction Alerts

Product Description
Stockley’s Drug Interactions is the world’s most comprehensive and authoritative international reference source on drug interactions, covering therapeutic drugs, proprietary medicines, herbal medicines, foods, drinks, pesticides and some drugs of abuse.

Stockley’s Interaction Alerts are derived from the full text publication to provide healthcare professionals with a quick way to check for potential interactions in a clinical setting. In essence the Alerts summarise drug-drug, drug-herb and drug-food interactions in a few short lines to give a quick ready-reference to whether drugs can safely be taken together.

There are now over 40,000 Alerts. They are deliverable in xml and are designed to be easily integrated into prescribing and dispensing systems and other medicinal products.

Overview
Each Alert comprises of a two-part interaction message:
- The first part gives a description of the interaction.
- The second part gives guidance on the management of the interaction.

The Alert includes an indication of the relevant route of administration for each interacting combination. For those with access to Stockley’s Drug Interactions, links to the corresponding monographs provide access to detailed and fully referenced discussions of each interaction.

The Alerts are rated using three separate categories:

Action
This describes whether or not any action needs to be taken to accommodate the interaction. This category ranges from ‘avoid’ to ‘no action needed’.

Severity
This describes the likely effect of an unmanaged interaction on the patient. This category ranges from ‘severe’ to ‘nothing expected’.

Evidence
This describes the weight of evidence behind the interaction. This category ranges from ‘extensive’ to ‘theoretical’.

Updates
Stockley’s Interaction Alerts is comprehensively reviewed every 2 years and new interactions are added on regular basis.

Audience
- Pharmacists
- Clinicians
- Healthcare Professionals

**Product Description**

Stockley’s Drug Interactions provides the healthcare professional with quick and easy access to clinically relevant, evaluated, and evidence-based online information on interactions between therapeutic drugs, proprietary medicines, herbal medicines, foods, drinks, pesticides and drugs of abuse.

Based upon the many thousands of published clinical papers and reports, Stockley’s Drug Interactions provides a series of detailed yet concise monographs designed for quick and easy reference. Stockley’s Drug Interactions provides the busy healthcare professional with quick and easy access to clinically relevant, evaluated and evidence-based information on drug interactions.

**Purpose**

- To provide the busy healthcare professional with quick and easy access to clinically relevant, evaluated and evidence-based information on drug interactions.

**Uses**

For answers to the following practical questions…

- Are the drugs in question known to interact or is the interaction only theoretical and speculative?
- They do interact, how serious is it?
- Are all patients affected or only a few?
- Is it best to avoid these two drugs altogether or can the interaction be accommodated in some way?
- What alternative and safer drugs can be used instead?

**Key Coverage**

- Over 14,000 drug interactions in 2,800 monographs
- Includes over 17,600 references
- Designed for quick and easy access
- Tailored thesaurus allows selection of appropriate search terms
- Intuitive interactions and full text search options
- Ability to enter up to 12 drugs at a time
- Search by approved names, international trade names, and other synonyms including drug codes

**Updates**

All the content is revalidated, revised, every 2 years, with intermediate releases every quarter. This process involves both scheduled, in-depth revision on a chapter-by-chapter basis and updates in reaction to new information as it arrives. All revised content undergoes a series of rigorous checking procedures to ensure not only that any changes are valid and appropriate but also that important points have not been missed. The monographs are written by practicing clinical pharmacists.

**Audience**

- Pharmacists
- Clinicians
- Healthcare Professionals
